Contents

1. Typical Lead Times (HSST benchmarks)
2. Five Variables Affecting Lead Time
3. MOQ and Stocking Advice

Typical Lead Times (HSST benchmarks)

Standard cut-to-size (stock varieties): 7–15 days; custom formats and finishes: 15–30 days; book-matched feature walls: 30–45 days (including digital layout confirmation); large curtain-wall packages: 45–90 days following shop drawings. Contract terms prevail.

Five Variables Affecting Lead Time

Block availability; speed of layout confirmation (client side); process complexity (profiles / combined mouldings); sealing and curing time; shipping and customs (allow 15–30 days voyage for overseas projects).

MOQ and Stocking Advice

MOQ for standard varieties in a single format can be as low as a few tens of square metres; rare luxury stones are block-purchased, so plan quantities in block increments. Allow 3–5% cutting wastage on bulk orders, 5–8% for profiles and book-matched areas. HSST's 80,000 m² base carries standing slab stock for small-batch rapid response.
